

Exercise set 5

Textbook: Exercises 6.6, 6.7, 6.10, 6.12,

Problem 1:

Go through Example 6.11 in Rizzo page 169-170, but look at the integral

$$\int_1^{\infty} \frac{e^{-x}}{1+x^2} dx$$

instead. What changes are needed, and what changes do you observe in the results?
(Hint: A change of variables to $x = 1/y$ might be useful.)
