

Answers to Dat540-23H exam

1.a

2.c # change in 'a' reflects in 'b', because both variables point to the same location in memory.

3.c

4.b

5.b

6. d

7.a : Sorting heroes based on the second column (7,8,9)

8.b

9.b

10.b

11.c

12.a

13.a

14.(modified b)Answer: 1 4 new_value (Lists and dictionaries are mutable, so changes made to them inside the function affect the original objects. Tuples are immutable, so reassigning my_tuple inside the function does not affect the original tuple outside the function.)

15.b

16.d

17.b # By default, it is stacking over axis =0, vertical stacking

18.d

19.b

20.a

21.d

22.a : Answer: with open("data.txt", "r") as file:

`content = file.read()`

23.d :Answer =5 (Five 1s)

24.c # the local variable 'word' is not accessible outside the function

25.b

26.a

27.a : TypeError: 'tuple' object does not support item assignment

28.d

29.a (no duplicates for set variables)

30.c # A dictionary where the keys are the unique characters and the values are the frequency of those keys inside the string 's'.

31.b

32.a

33. "b" can be correct: but the standard approach is

`df_resampled = df.resample('M', on='timestamp')['value'].mean()`

34.c

35.a

36.c

37.b

38.a

39.b

40.d :If we select the Sigmoid function as the output layer's activation, a single output neuron suffices for binary classification. In contrast, using 'SoftMax' typically requires two output neurons.(but the more common way is using Sigmoid function)
